### **Constellation Computers**

Hi Gerald

Pearly's Restaurant subscribed to Constellation's "Software Insurance" in December last year. Yesterday a power spike from Eskom caused damage to our primary admin computer, which hosts our Pastel Accounting and Payroll systems as well as all our critical documents and spreadsheets.

A quick call to Constellation and the wheels were set in motion to restore our system.

Normally it would take many hours, if not days, to re-install our operating system, re-install all the programs we use and reconfigure and setup all our hardware. With the images that Constellation created it took only a couple of hours to get our computer up and running and we were then able to restore our backups and continue working.

The best part is that, as part of the software insurance program, there was no charge to restore our computer. Any insurance is normally a "grudge" purchase but for us Constellation's Software Insurance has already paid for itself for the next few years.

I have an extensive IT background and recommend this product highly.

Kind Regards

David Warmerdam
